

WHY YOU NEED YOUR

CONDENSER COILS CLEANED

Condenser coils are located outdoors and are responsible for removing the heat from your home. Over time, dirt, dust, grime, and debris can cover the condenser coils, causing performance issues. Here are two reasons why your condenser coils need routine cleaning:

TO SAVE COST

A dirty condenser won't be able to cool the refrigerant effectively, which translates to more running hours. HVAC units that don't perform at optimal levels use more energy, raking up utility bills. In addition, heat buildup can damage the condenser and other components, resulting in premature breakdowns, inconveniences, and expensive repairs.

INCREASE LIFESPAN

Cleaning condenser coils is part of the routine maintenance required to keep your system working efficiently. Regular cleaning will prevent overloads, overheating, and premature breakdowns, resulting in a longer lifespan. HVAC units can only reach their 10-15 year life expectancy when well maintained through routine cleaning and repairs.

PROFESSIONAL CONDENSER COIL CLEANING

McWilliams & Son is a leading HVAC contractor with experienced NATE-certified technicians. Speak to one of our experts today to find out more about condenser cleaning and how we can help you with other heating and cooling services.
